

## Chinese retort machine manufacturer

Chinese sterilizing pots generally use water-bath sterilization and steam sterilization. We often say that water killing and steam killing are two sterilization methods. In the 1990s, in order to meet the special product production requirements such as flexible packaging, we began to introduce double-layer sterilization from Japan. In the beginning of the new century, European countries such as Spain, Germany, France, etc., in order to save energy and water resources, launched a spray-type sterilizer with heat exchangers, especially France adopts the most advanced steam circulation in the pot. The system aims to achieve high temperature and energy saving, short-term high efficiency, and water conservation. At present, most of our domestic automatic retort machines adopt the concept of Japanese-style pots and European-style spray-type retort machines with heat exchangers.

## retort machine manufacturer

China's retort machine manufacturers are the largest manufacturers in Zhucheng City, Shandong Province, accounting for more than 60% of the total number, mainly in large-scale industrial high-temperature and high-pressure retort machines. The small-scale laboratory retort machines of southern manufacturers account for a large market share. Formed the two retort machine manufacturers in China and South China. Zhucheng sterilizing pots in the north, Zhoukou sterilizing pots, Shanghai sterilizing pots in the south, and Wenzhou sterilizing pots are very famous. Among them, the most enterprises are Zhucheng retort machine manufacturers.

## Zhucheng retort machine manufacturer

There are many manufacturers of Zhucheng retort machines, both large and small. The large scales include Ding Taisheng, JOOYAN, and Zhongtai. They mainly produce retort machines and sandwich pots. There are 70 retort machine manufacturers in Zhucheng, which mainly produce large-scale sterilization. The pot, the automatic retort machine, also produces a small automatic retort machine that does not use a boiler for electric heating.

## Food retort machine video

Different retort machines have different appearances due to different manufacturers, but the method of use is basically the same. The following is the video of the food retort machine sold by JOOYAN Machinery, which is used for reference when designing the assembly line. Food retort machine using video Zhucheng large retort machine has a single tank horizontal retort machine, double pot series retort machine, three pot series retort machine, multi-pot parallel retort

machine. The forms of sterilization include water bath type, spray type, rotary type, steam type, mostly stainless steel retort machine, and a small amount of carbon steel steam retort machine production, mainly facing the food industry, widely used in meat products, soy products, dairy products, Egg products, seafood, beverages, canned food, snack food and other industries.

water spray retort machine

Three pots series water bath type automatic retort machine

Zhucheng small automatic retort machine has 700 type, 900 type, 1000 type electric steam dual-purpose retort machine. The characteristic is electric heating, no need to install boiler, the whole machine is about the same size as the double bed, suitable for small food factory, personal Taobao guest, 380 volts, 30 kW, whole machine stainless steel production. The best-selling one is the semi-automatic 700 type retort machine, which is 120 kg once sterilized, and the water is recycled, and the price is about 37,000.

Which is the best Zhucheng retort machine?

There are many enterprises in Zhucheng sterilizing pots, many models, many functions, and large price differences, which is difficult for many buyers to choose. For large-scale safety pressure vessels such as retort machines, manufacturers with pressure vessel production licenses, business licenses, and production and installation experience should be selected. They have professional engineers and technicians to serve you. Large double-pot enterprises have more guarantees on product quality.

retort machine repair

The retort machine is a large-scale high-temperature and high-pressure vessel. Please contact the original manufacturer for equipment maintenance, or find a repair and modification of the manufacturer with pressure vessel production license. Otherwise, it is not only difficult to pass

the inspection, but also easy to leave a safety hazard. It is unfavorable for future accident handling, and the equipment is modified privately. The accident caused by the retort machine manufacturer is irresponsible, and the manufacturer of the retort machine is fully responsible. You can't pay a big price in order to save a little money. retort machine maintenance consultation telephone 18853694851
